DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gill et al. (US 5,156,991) in further view of the admitted prior art.

Gill discloses the limitations of:

forming a bypass film (19, fig. 4c) from an insulation film (20, fig. 4c) through which a leak current is able to easily flow as compared with a gate insulation film of a MIS transistor and forming a gate electrode (12 and 17, fig. 2a) which extends above said bypass film (col. 5, ln. 43 – col. 6, ln. 17); and

performing a work process (col. 3, lns. 29-47).

3. Gill discloses the claimed invention except for etching off said first gate insulation film at a region of said bypass film and forming a second gate insulation film to become said bypass film and wherein the gate electrodes of a MOS transistor form a pixel.

However, there is no distinction in the functioning of the bypass film whether etching gate insulation film partially or fully and forming a second gate insulation and the background section on page 5 of the specification, third paragraph, discloses that it is known to form a pixel out of a transistor; therefore one of ordinary skill in the art would use these limitations with the invention disclosed by Gill.
